

bleed edge - any artwork that touches the trim line needs to extend to the edge of the bleed - 5.75"w x 8.75"h
trim line - 1/8" from bleed-no text/graphics meant to bleed w/in .25" of this yellow line

safe zone for content (inside blue line) - 5"w x 8"h

bleed edge - any artwork that touches the trim line needs to extend to the edge of the bleed - 5.75"w x 8.75"h

trim line - 1/8" from bleed-no text/graphics meant to bleed w/in .25" of this yellow line

safe zone for content (inside blue line) - 5"w x 8"h

The diagram illustrates a page layout with three distinct boundaries. An outermost yellow dashed line represents the bleed edge, with a height of 8.75 inches and a width of 5.75 inches. Inside this is a blue solid line representing the trim line, which is 1/8 inch from the bleed edge. The area between the trim line and the bleed edge is intended for artwork that needs to extend to the edge of the bleed. The innermost area, bounded by the trim line, is the safe zone for content, which is 5 inches wide and 8 inches high.
